

Medlab Asia 2024

10-12 July 2024

Queen Sirikit National Convention Center - Bangkok

"To be a Preferred Partner"

- HORIBA offers whole blood POCT systems to contribute to clinical practice and provide testing in close proximity to patients -

HORIBA, an analytical instrument manufacturer located in Kyoto, Japan, contributes to the field of medical diagnosis by offering tests near patients. "This is the concept of POCT (Point of Care Testing)". By being able to quickly confirm test results at the point of care, it leads to early detection and treatment, enabling accurate responses to critical medical conditions.

HORIBA proposes a testing approach using "whole blood" that requires no pre-processing, making our POCT systems faster, more convenient and more accurate.

Please visit our booth and experience our easy-to-use systems, suitable for clinics, hospital laboratories, and emergency settings.

We look forward to welcoming you at our booth.

Exibit Products

Hematology & CRP Analyzer

Microsemi CRP LC-767G (Asia)

Simultaneous measurement of 3 white blood cell classifications + CRP to support diagnosis of infected and severely ill patients

Automatic Multi-assay **POCT Blood Analyzer**
