Insight is an advanced facility and asset management system designed to help lab managers to optimize the performance of their test cells. This system elevates situational awareness, ensuring that all connected equipment maintains a strong state of health and operates in compliance with the necessary legislative standards. This heightened awareness gives lab managers peace of mind and confidence, ensuring the validity of test results and eliminating the need for test reruns.

Optimize Test Cell Availability

Today's test facilities face unprecedented challenges, as modern regulations introduce complex testing procedures that demand additional time and resources. This shift stands in stark opposition to the goals of enhancing productivity and reducing costs. Lab managers need to maintain acute awareness of their facility's status to maximize test cell availability. They must ensure that all equipment is consistently serviced and maintained so it remains in prime condition and meets every essential quality standard and regulation.

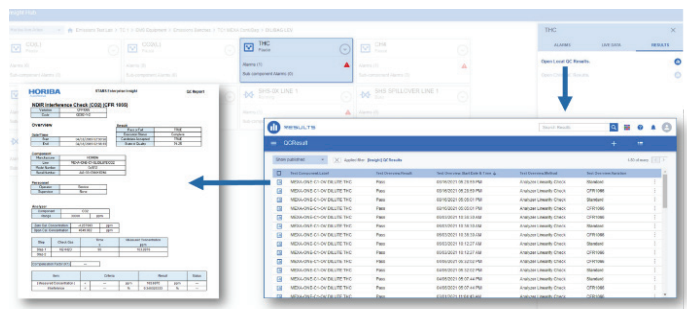

Insight **boosts test cell availability**, precisely **tracks facility utilization**, and ensures a **documented chain of custody** for unparalleled **operational integrity**

Insight improves laboratory management by presenting all essential information in a clear, accessible format, allowing lab managers to quickly assess the state of connected equipment. Through its intuitive dashboards, Insight displays current device status, alarms, and internal device channels. Beyond merely presenting live data, Insight logs these channels for subsequent failure analysis, pattern recognition, and utilization statistics compilation. Additionally, the system centralizes quality check results and reports, granting authorized personnel secure, straightforward access to this information for further analysis or audit preparation.

Further streamlining laboratory operations, Insight facilitates the rapid identification of forthcoming tasks and deadlines, enabling more effective planning and reducing the risk of errors that could lead to invalid tests or unexpected downtime. Lab managers can efficiently organize tasks into work packages and delegate them to qualified team members. Insight continuously tracks the progress, duration, and outcomes of these tasks, offering unparalleled control and visibility, thus empowering labs to operate more efficiently and effectively.

HORIBA Automotive provides innovative applications and insights, advanced automotive validation and verification technologies and equipment, and ongoing guidance and consultation to client partners across the globe. With 75 years of unmatched comprehensive scientific measurement and data management proficiencies, HORIBA Automotive's ever-expanding engineering expertise and ongoing innovations provide customers with complete solutions that solve industry challenges.
