This workshop aims to provide a comprehensive understanding of the scientific aspects involved in diagnosing bleeding disorders. Throughout this session, we will cover technical developments related to the selection of appropriate methods, reagents, and testing guidelines for accurate troubleshooting and clinical interpretation. By attending this workshop, you will acquire a better understanding of diagnosing patients with the risk of bleeding and thrombosis, and knowledge of the latest treatments for these patients.

Who should attend?

- Trainees in a hematology laboratory, transfusion medicine, vascular medicine, or internal medicine
- A scientist or laboratory officer willing to acquire clinical knowledge in the field
- Laboratory hematologist looking for an update on hemostasis
