OCMA-500 to measure concentration of oil contained in drainage and environmental water. After injecting the water sample and solvent, all you have to do is press the start button, and the system will automatically conduct the monitoring operation from oil extraction to sample measurement and draining. With no more troublesome operations like opening/closing the drainage valve, monitoring is speeded up. In addition, the color graphic LCD and the backlit extraction tank have improved operability.

**Feature**

- **Backlit extraction tank**
  The extraction tank is equipped with LEDs. Illuminating the tank makes it easy to check the phase separation between sample and solvent and set the extraction time.

- **Reduction of environmental impact and running cost**
  The OCMA-500 cuts solvent consumption by 20% compared with our previous products, reducing environmental impact. It also reduces the running cost.

- **Measurement mode**
  Measurement can be switched automatically or manually.
  
  **Auto mode**
  Stirring, measurement and draining are automatically conducted after injection of the sample.
  
  **Manual mode**
  You can conduct measurement operation at any timing while checking the extraction state.

**Example of manual mode**

- Liquid delivery
- Stirring
- Drainage

**Fully used in various applications**

- **Factory drainage**
  For monitoring final discharge water

- **Ballast, bilge**
  For monitoring discharge from ships

- **Vehicle maintenance site and gas station**
  For monitoring water quality in surrounding areas

- **Others**
  Water quality survey based on environmental standard. For monitoring final discharge from petroleum refinery plant. For oil dispersion research at time of an accident.
OCMA-550 to measure residual oil on components and concentrations of oil adhered on solids such as soil. Measurement can be easily made only by injecting the extracted water sample into the attached cell and setting it to the equipment. This model features a simple design which allows opening/closing of the door to setting of cell with just one hand. This is best for measurement of extracted samples such as evaluation of residual oil on components and measurement of oil contained in food.

Feature

- **Cell is easily detachable with just one hand**
  Simple design which allows opening/closing of door and detachment of cell with just one hand. Measurement operation becomes smoother.

- **Timer function**
  A timer function to display a measurement value in a certain amount of time is equipped. This saves work and time required for measurement.
Automatic operation with one switch

Compact oil content analyzer OCMA-500 series.
Operability is significantly improved while user-friendly features of the conventional products are maintained as they are.
This machine is easy for anyone to use because all you have to do is press a button.
This can be utilized across wide varieties of applications such as drain monitoring and quality control for components.

Easy and speedy measurement for approx. 3 minutes*1

Measurement can be easily made in a short time only by pressing the start button.
Measurement time can be significantly reduced in comparison with the n-hexane extraction method.
*Excepting time for warming and calibration.

3 minutes

1 minute
Put sample and solvent into OCMA.*2

1 to 2 minutes
Start measurement by the start button.

In less than 1 minute
Read the measured value.

*1 Shortest time. Measurement time depends on quality of sample.
*2 In case of OCMA-500: Put extracted sample into the cell to set in case of OCMA-550.

Any oil with low boiling point can be measured

The n-hexane extraction method needs to evaporate solvent and any oil with a low boiling point (toluene, gasoline, etc.) is evaporated along with solvent. The OCMA-500 series does not need to evaporate solvent, preventing evaporation of these kinds of oil.

What is the n-hexane extraction method?
Testing method used to measure oil components. Because oil of a low-boiling component such as gasoline or toluene is volatilized, an error may occur if they are included. It is necessary to take note of them when making evaluations.

Improvement of operability

Color graphic liquid crystal

It is easier to see menu and measurement results because a 3.5 inch color graphic (LCD) is employed.

USB data output port

It is easy to control data in a personal computer by saving data in a USB memory.
*A format supports USB of FAT/FAT32. HORIBA recommended USB is available.

Unit conversion function

Indication unit (mg/L, mg/kg, mg/g, mg/PC, Abs (OCMA-550)) can be changed according to the purpose by inputting the measurement conditions.

Multi-language function

Japanese, English, Russian, Chinese, Korean, German and French languages are available. Each language can be selected from the screen menu.

How to measure by OCMA

The OCMA-500 series extracts the oil components contained in a measurement sample into solvent (S-316) to measure the oil content with an IR analyzer.

*Carry out pre-washing for correct measurement.
*In case of OCMA-500

* OCMA-500/550 may not be able to measure some samples containing protein, surfactant, hydrophilic organic solvent and others. Please ask your local dealer before purchasing when considering these kind of samples.
Oil Content Analyzer
OCMA-500

Standard Accessory
- Filter element: For water filter, diameter 40 mm, including 5 elements
- Dropper: Made of polyethylene, 2.5 mL
- Code set: Power supply cable (for domestic use)
- B heavy oil: 10 mL
- Instruction manual: OCMA-500
- Water absorptive sheet: Liquid tray from extraction tank

Option
- Oil extracted solvent: S-316
- Measuring Syringe set (Simple type): Micro Syringe 25 µL
- Measuring Syringe (For Sample): 20 mL
- Measuring Syringe (For Solvent): 10 mL
- Measuring Syringe set (Standard type): Micro Syringe 25 µL
- Measuring Syringe (For Sample): 20 mL
- Measuring Syringe (For Solvent): 20 mL
- Packing: For water filter
- For extraction tank
- Solvent Reclaimer: SR-305

*Measuring is easy because with stopper.

Oil Content Analyzer
OCMA-550

Standard Accessory
- Dropper: Made of polyethylene, 2.5 mL
- Code set: Power supply cable (for domestic use)
- B heavy oil: 10 mL
- Instruction manual: OCMA-550
- Cell: Quartz (20 mm): 1 piece
- Cell cap: Cap for cell: 1 cap

Option
- Oil extracted solvent: S-316
- Measuring Syringe set (Simple type): Micro Syringe 25 µL
- Measuring Syringe (For cell injection): 10 mL
- Solvent Reclaimer: SR-305

For the first purchase customer
In order to measure oil content with OCMA-500 series, you need the following products. If you don’t have these products, please purchase from optional list.
