Two Color Silicon and Indium Gallium Arsenide Solid State Detector

DSS-SIGA020

These dual color single point detectors detect signals across a broad wavelength range, with a dual layered photodiode design using silicon on top of indium gallium arsenide. The silicon photodiode is transparent to wavelengths above 1000 nm allowing the InGaAs to detect those longer NIR wavelengths. With high sensitivity (D*) and two options for ambient and thermoelectric cooling, responsivity extends from 200 nm to 2600 nm. This is one of a number of dual color single point solid state detectors available from HORIBA Scientific. Contact us for further information.

An excellent two-color detector composed of silicon and indium gallium arsenide photodiodes, available in two different cooling levels, provides broad spectral response from the UV to near-IR.

Features and Benefits

- Wide spectral responsivity from 200 nm to 1700 nm
- High sensitivity (D* ~10^-13)
- Compact ambient and TE detector housing

Accessories

Various accessories are available for powering the detectors, optically coupling detectors to HORIBA monochromators, and data acquisition.

- Power supply for TE cooled detector, DSS-15V-TEP
- Power supply for ambient, DSS-15VP
- Mirror-based housing, 1427C
- BNC cable, J30646
- SpectrAcq2 data acquisition module
- SMA fiber adapter, DSS-SMA
- Dual 1427C housing adapter, J23078370
- Dual detector housing, J23079050
- BNC switchbox for dual detectors, SWB-AB
## Specifications
