

Oil Content Analyzer OCMA-500/550

Explore the future

HORIB

100

Automatic operation with one switch

Compact oil content analyzer OCMA-500 series. Operability is significantly improved while user-friendly features of

the conventional products are maintained as they are.

This machine is easy for anyone to use because all you have to do is press a button.

This can be utilized across wide variety of applications such as drain monitoring and quality control for components.

Easy and speedy measurement for approx. 3 minutes^{*1}

Measurement can be easily made in a short time only by pressing the start button. Measurement time can be significantly reduced in comparison with the n-hexane extraction method. *Excluding time for warming and calibration.

*2 In case of OCMA-500. Put extracted sample into the cell to set in case of OCMA-550.

Any oil with low boiling point can be measured

The n-hexane extraction method needs to evaporate solvent and any oil with a low boiling point (toluene, gasoline, etc.) is evaporated along with solvent. The OCMA-500 series does not need to evaporate solvent, preventing evaporation of these kinds of oil.

What is the n-hexane extraction method? Testing method used to measure oil components. Because oil of a low-boiling component such as gasoline or toluene is volatilized, an error may occur if they are included. It is necessary to take note of them when making evaluations.

Improvement of operability

Color graphic liquid crystal

It is easier to see menu and measurement results because a 3.5 inch color graphic (LCD) is employed.

Unit conversion function

Indication unit (mg/L, mg/kg, mg/g, mg/PC, Abs (OCMA-550)) can be changed according to the purpose by inputting the measurement conditions.

Multi-language function

Japanese, English, Russian, Chinese, Korean, German and French languages are available. Each language can be selected from the screen menu.

How to measure by OCMA

contained in a measurement sample into solvent (S-316) to measure the oil content with an IR analyzer.

*In case of OCMA-500

USB data output port

It is easy to control data in a personal computer by saving data in a USB memory.

*A format supports USB of FAT/FAT32, HORIBA recommended USB is available.

Comply with the ASTM D7066-4

ASTM D7066-4 is a standard method which covers the determination of oil, grease and nonpolar material in the water, defined by ASTM (American Society for Testing Materials).

The OCMA series complies with ASTM D7066-4 by performing 5 point calibration with infrared determination in the measurement.

* OCMA-500/550 may not be able to measure some samples containing protein, surfactant, hydrophilic organic solvent and others. Please ask your local dealer before purchasing when considering these kind of samples.

For measurement of **Oil in wastewater**

Oil Content Analyzer

OCMA-500 to measure concentration of oil contained in drainage and environmental water. After injecting the water sample and solvent, all you have to do is press the start button, and the system will automatically conduct the monitoring operation from oil extraction to sample measurement and draining. With no more troublesome operations like opening/closing the drainage valve, monitoring is speeded up.

le, (2) Measurement start

3 Extraction and measurement

100

Feature

solvent

Backlit extraction tank

The extraction tank is equipped with LEDs. Illuminating the tank makes it easy to check the phase separation between sample and solvent and set the extraction time.

Before extraction After extraction *The color depends on the sample.

Reduction of environmental impact and running cost

The OCMA-500 cuts solvent consumption by 20% compared with our previous products, reducing environmental impact. It also reduces the running cost.

Measurement mode

Measurement can be switched automatically or manually.

You can conduct measurement operation at any timing while checking the extraction state.

Fully used in various applications

For monitoring final discharge water

For monitoring discharge from ships

For monitoring water quality in surrounding areas

Water quality survey based on environmental standard. For monitoring final discharge from petroleum refinery plant. For oil dispersion research at time of an accident.

For measurement of Residual oil on components

Oil Content Analyzer CMA-550

OCMA-550 to measure residual oil on components and concentrations of oil adhered on solids such as soil. Measurement can be easily made only by injecting the extracted water sample into the attached cell and setting it to the equipment. This model features a simple design which allows opening/closing of the door to setting of cell with just one hand. This is best for measurement of extracted samples such as evaluation of residual oil on components and measurement of oil contained in food.

(2) Inject measuring solvent to extract oil solvent into cell

(3) Set the cell to the equipment

100

Feature

(1) Dip sample into

Cell is easily detachable with just one hand

Simple design which allows opening/closing of door and detachment of cell with just one hand. Measurement operation becomes smoother.

Timer function

A timer function to display a measurement value in a certain amount of time is equipped. This saves work and time required for measurement.

For quality control of components

To prevent reduction of cooling function

For evaluation of degreasing capacity

Useful for soil (environmental pollution). food (health hazard) and gas (quality deterioration)

Oil Content Analyzer **OCMA-500**

Standard Accessory

Filter element	For water filter, diameter 40 mm, including 5 elements		
Dropper	Made of polyethylene, 2.5 mL		
Code set	Power supply cable (for domestic use)		
Tridecane	25 mL		
Instruction manual	OCMA-500		
Water absorptive sheet	Liquid tray from extraction tank		

Option

Oil extracted solvent	S-316		
Measuring Syringe set (Simple type)	Micro Syringe 25 µL Measuring Syringe (For Sample) 20 mL Measuring Syringe (For Solvent) 10 mL		
Measuring Syringe set (Standard type*)	Micro Syringe 25 µL Measuring Syringe (For Sample) 20 mL Measuring Syringe (For Solvent) 20 mL		
Packing	For water filter For extraction tank		
Solvent Reclaimer	SR-305		

*Measuring is easy because with stopper.

Cell	Quartz (20 mm): 1 piece		
Cell cap	Cap for cell: 1 cap		

Option

Oil extracted solvent	S-316
Measuring Syringe set (Simple type)	Micro Syringe 25 µL Measuring Syringe (For cell injection) 10 mL
Solvent Reclaimer	SR-305

For the first purchase customer In order to measure oil content with OCMA-500 series, you need the following products. If you don't have these products, please purchase from optional list.

Dimensional Outline (Unit: mm)

Specifications

	OCMA-500	OCMA-550			
Measurement method	Solvent extraction – non-dispersive infrared absorption analysis method				
Measured objects	Substances extracted from sample water into solvent and have	ng infrared absorption pear a wavelength from 3.4 µm to 3.5 µm			
Measurement range					
	0 mg/L to 200 mg/L				
Resolution	For mg/L 0 to 99.9: 0.1, 100 to 200: 1				
Repeatability	10.0 mg/L to 99.9 mg/L: ±0.3 mg/L 10.0 mg/L to 99.9 mg/L: ±2.1 mg/L 100 mg/L to 200 mg/L: ±5 mg/L *For standard liquids at constant temperature	10.0 mg/L to 9.9 mg/L: ±0.5 mg/L 10.0 mg/L to 99.9 mg/L: ±2.1 mg/L 100 mg/L to 200 mg/L: ±5 mg/L *For standard liquids at constant temperature			
Display method	3.5 inches 320×240 dots	Backlight color graphic LCD			
Calibration method	Select each optionally zero c	alibration and span calibration.			
Amount of test sample required	2:1 (Sample water : Solvent)	-			
Extraction solvent	S-316 *Do not use any	other solvent than S-316.			
Amount of extraction	8 mL (possible to measure even at 10mL)	Approx. 6.5 mL (Amount of extraction solvent required)			
	Built-in extractor	Using the extraction solvent, and extracted manually			
Ambient operating	Duit-in extractor	outside the product			
temperature	0°C to 40°C (n	o condensation)			
Power supply	AC 100 V to 240	V ±10%, 50/60 Hz			
Power consumption	AC 100 V: Approx. 60 VA, AC 240 V: Approx. 90 VA	AC 100 V - 240 V: Approx. 60 VA			
External dimensions	342 (H) X 200 (W) X 313 (D) mm	195 (H) X 253 (W) X 293 (D) mm			
Mass	Approx. 7 kg	Approx. 5 kg			
External output	Output to a US	B memory stick			
Measurement flow	Automatic measurement (automatic switching sequence) and manual measurement after injection of liquid	-			
Cell length	-	20 mm			
Cell material		Quartz			
Functions	300-item data memory (measurement history) Self-error determination Stabilized measurement value display Clock function With backlight for stirred batch tank Unit conversion function Compliant with ASTM D7066-4	300-item data memory (measurement history) Self-error determination Stabilized measurement value display Clock function Unit conversion function Compliant with ASTM D7066-4
